

# **G1000 NXi Database Update Procedure**

## **Using SD Card**

1. Using blank SD card download all expired databases onto card.
2. With power **OFF** remove the upper MFD card (Trend) and insert loaded SD card into upper slot on the MFD.
3. Turn on NXi system.
4. Acknowledge message on startup screen to get to normal operating screen.
5. Navigate to **AUX, Database** page. Last page in AUX chapter.
6. Monitor the sync status in the Standby column until "SYNC Complete" indicated. You should then see a blue arrow between the standby and active column on the databases that were updated.
7. Turn off system
8. Removed loaded card from upper MFD slot and reinstall original upper card (Trend).
9. Turn system back on and navigate to the AUX, Database page. Verify Active databases are now current.
10. Enjoy your flight 😊
