G3000 Gen 1

Database update procedures

1. Make sure you have a current subscription
2. Have a blank SD card for downloading the Nav data
3. Log onto Jeppesen Services and download the Nav data onto the blank SD card
4. Removed lower SD cards from **MFD and PFD's** and download electronic chart data and any other databases (***except nav data***) that are expired onto all 3 cards from the Jeppesen Services program.
5. Reinstall lower SD cards in **MFD and PFD's**.
6. With ground power applied to aircraft (and aircraft turned off) insert Nav data card into top (empty slot) on pilots **PFD.**
7. Turn ground power on and turn avionics power on.
8. Follow on screen instructions to load new Nav data on **PFD** for standby and active databases.
9. After **PFD** finishes updates remove SD card from top slot of pilots **PFD.**
10. Navigate to the database page on GTC1 and verify that database sync is in progress.

11. Once sync is complete you should see a message on GTC "on ground power cycle required"
12. Turn off aircraft power and wait 5 seconds then turn power back on.
13. Verify all data bases are correct on startup page of MFD.
14. Verify no messages about database mismatch.
